

Dental Dam
Polyisoprene

DENTAL DAMS: PROTECTION FOR YOU AND YOUR PATIENTS

Protect patients by reducing the risk of aspiration/ingestion of debris and foreign objects

Improve operative site access and visibility by retracting cheeks, lips and tongue

Increase efficiency by providing unobstructed operative field access and visibility

Improve results by providing a moisture-free environment that allows restorative materials to set under optimal conditions

Prevent cross-contamination through direct contact or aerosolization from high-speed instruments

Winner of the 2020 Dental Advisor Top Product Award for non-latex dental dams

Hedy polyisoprene dams offer a remarkable 1230% elongation and impressive tear strength. Learn more at medicom.com.
